Important Health Warning About Playing Video Games

Photosensitive Seizures

A very small percentage of people may experience a seizure when exposed to certain visual images, including flashing lights or patterns that may appear in video games. Even people who have no history of seizures or epilepsy may have an undiagnosed condition that can cause these "photosensitive epileptic seizures" while watching video games.

These seizures may have a variety of symptoms, including lightheadedness, altered vision, eye or face twitching, jerking or shaking of arms or legs, disorientation, confusion, or momentary loss of awareness. Seizures may also cause loss of consciousness or convulsions that can lead to injury from falling down or striking nearby objects.

Immediately stop playing and consult a doctor if you experience any of these symptoms. Parents should watch for or ask their children about the above symptoms—children and teenagers are more likely than adults to experience these seizures. The risk of photosensitive epileptic seizures may be reduced by taking the following precautions:

- Sit farther from the television screen.
- Use a smaller television screen.
- Play in a well-lit room.
- Do not play when you are drowsy or fatigued.

If you or any of your relatives have a history of seizures or epilepsy, consult a doctor before playing

From: Lucy Stillman

To: Dr. Warren Vidic

Subject: Re: Animus Functionality & New Subject

Attachments: Animus Control & Feedback.txt

Warren,

As requested the other day in our weekly meeting, I've begun preparing the files on our new subject, #17 Desmond Miles, and his ancestor Altaïr (born circa 1165 - date of death unknown).

Please find attached my first draft of the animus control & feedback system for the board presentation next week. Feel free to make comments or suggestions.

Cheers,

Lucy.

Subject #17

Desmond Miles

Age: 25

Weight: 170 lbs

Height: 6'

Blood Type: A+

Nationality: U.S.

Psychological traits: Independent, introverted, and defensive. Desmond has trouble trusting others. His parents were incredibly overprotective, essentially imprisoning him within their community, swearing it was for his own good. He has spent the past nine years avoiding large cities, hiding from civilisation. He guards his thoughts and emotions behind a wall of cynicism.

He might be a little difficult to work with. — Lucy

Ancestor for this treatment:

Altaïr Ibn La-Ahad ("Son of None")

Age: 25

Weight: 170 lbs

Height: 6'

Nationality: Unknown

Year: 1191

Months for Study: July – August – September

Personal History: Little is known of Altaïr and the assassins for whom he worked.

Psychological Traits: Disciplined, focused, bold.

EA2

EA1

1. Animus controls

1.1 Animus controls

The animus allows the subject to control his ancestor through a combination of standard and contextual buttons. Standard buttons always perform the same action, for example pressing D-pad up always selects the Hidden Blade. Conversely, the action resulting from a contextual button press will change depending on the context the ancestor is currently in. For example, the A button can make the ancestor sprint, jump, dodge, blend or run up a wall, depending on the context.

Vidic - When we switched the animus control scheme to use standard videogame controls I guessed that the subject's learning curve would improve, but the increased acclimatisation rate we are seeing with these slacker types is astounding.

FAMILY SETTINGS

These easy and flexible tools enable parents and caregivers to decide which games young game players can access, based on the content rating. For more information, go to www.xbox.com/familysettings.

1.2 Standard Controls

The standard animus controls are not contextual. Each of the buttons below always triggers a single predictable action in the ancestor.

1.2.1 Move

The subject moves his ancestor using the Movement stick. Moving the stick up or down moves his ancestor forward or backward. Moving the stick left or right makes the ancestor turn to the left or to the right.

1.2.2 Look

Using the Look stick, the subject can look around the ancestor's environment. Pressing the stick makes the camera re-centre on the back of the ancestor.

1.2.3 Target and Lock On

The animus will display specific visual effects on certain citizens with whom the ancestor can interact. By pressing the Targeting button, the attention of the ancestor focuses on the selected citizen, and he is then locked on to that citizen. When locked, the ancestor can pickpocket, interrogate, kill and accomplish other objectives. Press the Left Trigger to enter Fight mode. Once you are in Fight mode, targeting will switch automatically to the nearest enemy. When you want to exit Fight mode, press the Left Trigger again to unlock and run away.

1.2.4 High Profile

By holding the High Profile button, the subject enters High Profile mode. The profile of the subject dictates the actions. (See section 1.3.1 for more details.)

Vidic - Lucy, this layout is confusing. Why mention High Profile mode here if you are not going to describe it until later?

1.2.5 Chase Camera

When the subject is chased by a soldier, pressing the Chase Cam button makes the camera change its viewing angle to see the closest pursuer.

1.2.6 Quick Inventory

Each side of the D-pad has a weapon associated with it.

Pressing a direction on the D-pad once selects the weapon assigned to that direction. Pressing a second time unsheathes the weapon.

Up: Hidden Blade

Down: Fists

Left: Short blade and Throwing knives

Right: Long Sword

1.2.7 Pause

By pressing the Start button, the subject accesses the Pause menu.

1.2.8 Map

Pressing the Back button opens up the map. (See section 2.8 for details.)

Vidic - (See comment 1.2.4 for why I am annoyed.)

1.3 Contextual Puppeteering Controls

The animus allows the subject to control his ancestor like a puppet. Each body part is linked to a button (head **Y**, weapon hand **X**, empty hand **B**, and legs **A**). In the top right corner, the heads-up display (HUD) shows each button's functionality. You will notice that the functionality changes depending on the context.

Vidic - Holding down buttons is much more effective than tapping.

1.3.1 High and Low Profile

It is possible to change the intensity with which the ancestor performs each action.

By default, the ancestor will be in low profile, but the ancestor's state can be changed to high profile by pressing and holding the Right trigger.

Vidic - This is like stepping on the accelerator! In low profile, the ancestor's actions are inconspicuous and more socially acceptable. Fast and powerful assassin moves are available in high profile.

1.3.2 Free Roaming

1.3.2.1 Free Roaming: Low Profile

A Blend

Press and hold the Legs button to blend in and pass close to informed soldiers unnoticed. The ancestor moves more slowly when blending.

B Gentle Push

Press and hold the Empty Hand button to perform a gentle push. A gentle push is socially acceptable and will allow the ancestor to get past citizens without making them drop what they are holding.

X Attack

Pressing the Weapon Hand button makes the ancestor attack with his currently equipped weapon.

Vidic - Doesn't this belong in the fight section? You should add a note that attacking is easier if you are locked on a target, otherwise the ancestor will just perform some less effective mobile attacks.

Y Vision

Pressing the Head button makes the ancestor enter first-person view.

- First-person view can only be triggered if the ancestor is stationary. The camera returns automatically to third-person if the ancestor starts walking.
- If the subject's synch bar is at 100%, the first-person view is enhanced with Eagle Vision. We believe that in these moments of perfect synch, the animus is able to read and display Altair's gift for intuition. The animus has colour-coded intuitive powers, as follows: red=soldiers, blue=allies, white=civilians with information, gold=assassination targets.

1.3.2.2 Free-Running: High Profile

A Sprint / Free-Run

Press and hold the Legs button to make the ancestor perform free-running. Holding this button down makes the ancestor automatically adapt to any object in his path. Just push the movement stick in the direction you want the ancestor to go.

Example: The subject is on the ground, close to a wall: Holding the Free-Run button and pushing the movement stick in the direction of the wall makes the ancestor climb that wall.

– If no Free-Run objects are in the path of the assassin, holding the Legs button while moving around in high profile makes the ancestor sprint.

B Grab and Throw

Pressing the Empty Hand button while standing still makes the ancestor grab an NPC, then throw him.

– The throw direction depends on the direction in which the subject is moving the movement stick.

Pressing the Empty Hand button while running makes the ancestor tackle anyone in his way, clearing the path of civilians.

X Attack

Pressing the Weapon Hand button makes the ancestor attack with his currently equipped weapon.

Y Vision

> Pressing the Head button makes the ancestor enter first-person view.

- First-person view can only be triggered if the ancestor is stationary. The camera returns automatically to third-person if the ancestor starts walking.
- If the subject's synch bar is at 100%, the first-person view is enhanced with Eagle Vision. We believe that in these moments of perfect synch, the animus is able to read and display Altair's gift for intuition. The animus has colour-coded intuitive powers, as follows: red=soldiers, blue=allies, white=civilians with information, gold=assassination targets.

1.3.3 Fight

Fight abilities will change depending on your ancestor's Assassin Rank. Combo kills are mastered at rank 1, while counters are only mastered at rank 2. The assassins were known for their deadly defensive counters, so the subject may want to steer away from big battles until these high-profile counters are mastered.

1.3.3.1 Fight: Low Profile = Offensive Moves

A Step

Pressing the Legs button makes the ancestor perform a stepping motion, based on the direction that the subject is holding the movement stick.

B Grab

Pressing the Empty Hand button makes the ancestor attempt a Grab and Throw move on an enemy NPC.

The throw direction depends on the direction in which the subject is moving the movement stick.

X Attack

Pressing the Weapon Hand button makes the ancestor attack an NPC with his currently equipped weapon.

The strength of the attack depends on the length of time the subject holds down the button.

Tap for a quick attack.

Tap a second time as soon as your weapon makes contact to unlock a combo attack.

Hold for a slower but stronger attack.

1.3.3.2 Fight: High Profile = Defensive Counters

In Fight mode, high profile enables defensive actions like counters and dodging moves.

By default, holding the High Profile button makes the subject deflect enemy attacks.

A Dodge

When pressing the Legs button with the right timing, the ancestor performs a counter-dodge move that exposes the enemy to a strike. If the timing is not good, Altaïr will be open to the enemy's strike.

B Counter-Grab

When pressing the Empty Hand button with the right timing, the ancestor performs a counter-grab move on an NPC that is attempting to grab the subject. If the timing is not good, the ancestor is grabbed by the enemy.

X Counter-Attack

When pressing the Weapon Hand button with the right timing, the ancestor counter-attacks an NPC. If the timing is not good, the ancestor is open to the enemy's strike.

1.3.4 Horse

1.3.4.1 Horse: Low Profile

A Blend

Holding the Legs button makes the horse move at its slowest pace; the blend. The blend cancels the proximity radius of soldiers, enabling the assassin to move next to soldiers without exposing himself.

B Dismount

Pressing the Empty Hand button makes the ancestor get off the horse.

X Rear/Attack

With the assassin's sword sheathed, pressing the Weapon Hand button makes the horse perform a rearing movement.

When the assassin is holding his sword, the Weapon Hand button makes the assassin attack.

Y Vision

Pressing the Head button makes the ancestor go into first-person view.

First-person view can only be triggered if the subject is not moving. If the subject is in first-person view and starts walking, the camera returns automatically to third-person.

If the subject's synch bar is at 100%, first-person view is enhanced with Eagle Vision. Eagle Vision lets the subject identify whether NPCs in a crowd are friends or foes.

1.3.4.2 Horse: High Profile

A Gallop

In high profile, holding the Legs button while moving the horse makes it move at its fastest pace; the gallop.

B Dismount

When pressing the Empty Hand button, the ancestor will dismount the horse.

X Attack

Pressing the Weapon Hand button makes the ancestor perform an attack motion from the horse.

Y Vision

Pressing the Head button makes the ancestor enter first-person view.

- First-person view can only be triggered if the ancestor is stationary. The camera returns automatically to third-person if the ancestor starts walking.
- If the subject's synch bar is at 100%, first-person view is enhanced with Eagle Vision. We believe that in these moments of perfect synch, the animus is able to read and display Altair's gift for intuition. The animus has colour-coded intuitive powers, as follows: red=soldiers, blue=allies, white=civilians with information, gold=assassination targets.

2. Heads-Up Display (HUD)

The HUD provides important information while in the animus. Various elements of the display will allow the subject to remain aware of his current status.

2.1 Synchronisation Bar

When controlling the animus, the subject's actions need to be synchronised with the actions of his ancestor. The synchronisation bar shows the synchronisation level.

How to gain and lose Synchronisation

Gain Synchronisation by:

Completing an objective or staying anonymous. Your synchronisation bar regenerates automatically as long as you are anonymous and more slowly when you are exposed but at a slower rate.

Lose Synchronisation by:

Killing an innocent person, falling from too great a height or getting hurt in combat.

2.2 Abstergo logo

(See Social Status indicator for more details.)

2.3 GPS

Found in the bottom right corner of the screen, the GPS helps navigate by always showing which way north is. It can also display the location of various important memory objectives. A good way to fill the GPS with memory objectives is to climb to the top of landmarks and scan the view. Getting to these viewpoints will help the subject synchronise with the ancestor's memory of the area and remember what it was he did in those locations.

Vidic - With recent updates, the animus GPS can even display hiding spots nearby. He'd better keep his eye on the GPS if he gets into trouble. Hiding spots will help him become anonymous and resynchronise with his ancestor!

2.4 Control HUD

The top right corner displays the available actions at all times.

2.5 Chase Camera

The chase camera is accessible by pressing the left bumper (indicated on screen when available).

2.6 Cinematic Cuts

During a scene, the animus can reframe from a different angle. This can be activated by pressing any button or trigger during a visual glitch.

2.7 Map

Press the Back button to display a map of the area. The animus is able to fill in a basic outline of the area from historical data, but detailed information about the area will have to be filled in through the subject's DNA. The subject should climb to the top of landmarks and scan the view to become synchronised with the ancestor's memory of the area. This will allow the animus

fill the map with specific memory objectives and other details stored in the subject's genetic memory. A GPS marker can be placed on the map to assist the subject in reaching a desired location.

3. Interaction Loop

3.1 Ancestor's Social Status and Indicator

When starting a new session, the ancestor is anonymous and will remain so as long as his actions are socially acceptable. Walking next to soldiers is not a problem at this stage. Starting a fight, being spotted on rooftops, or killing people will change his status to **exposed** (icon flashing red).

When **exposed**, soldiers will immediately engage in fights with the ancestor. To return to an anonymous state, the ancestor must break soldiers' lines of sight (icon flashing yellow).

When **unseen**, he must find a hiding spot (bales of hay, roof gardens, benches, or scholars). Once in a hiding place, he'll begin to vanish (icon flashing blue).

When **vanished** (icon going back to white), he is once again anonymous and can safely leave his hiding place.

3.2 Soldiers' awareness levels

A soldier's awareness level will vary depending on the situation. Learning how to recognise these levels of awareness will be a great asset to the ancestor as he navigates through increasingly difficult situations.

Vidic - Yes! And learn it well! He MUST keep his eye on the indicator.

Unaware

Unaware soldiers won't interfere with the ancestor as long as his actions are socially acceptable. They will react only if the ancestor kills someone in front of them, provokes them directly, or if they witness another soldier in conflict with him.

Suspicious

Suspicious soldiers will react to socially unacceptable behaviour, such as harassing the crowd. They are more easily provoked and won't tolerate the ancestor bumping into them. Suspicious guards have one hand on their sword and will only give one warning before becoming informed.

Informed

Informed soldiers are on the lookout for the ancestor. He will be instantly recognised if he gets too close to them, or if he exhibits any unusual behaviour such as free-running, climbing walls, or bumping into civilians. Informed guards have their swords already drawn.

Vidic - This is the perfect time to blend to avoid being exposed.

City Alert

During City Alert, every soldier is informed and will attack the ancestor as soon as he stands out from the crowd (climbing, walling, bumping into civilians) or gets too close. City Alert is triggered when the ancestor assassinates a target.

4. Objectives

4.1 Assassinations

The subject's ancestor is an assassin, and his mission is to assassinate specific targets.

4.2 Viewpoints

The cities and the kingdom have viewpoints that can be reached by climbing tall buildings where eagles circle. These viewpoints are identified on the map and GPS by an eagle icon.

Vidic - A recent animus update adds an eagle flying above the building as well. Well done, Lucy.

To fill in all map details for an area, the ancestor must climb to the top of a viewpoint and press the Head button **Y** to synchronise with the appropriate memory strand. Synchronising reveals the position of the Assassins' Bureau, all other viewpoints of the district and the following elements in a radius around the viewpoints: citizens who need saving, stationary soldiers, hiding spots and all other investigation memories on the map.

4.3 Investigations

Before getting access to an assassination memory, the subject must complete a certain number of investigation memories. These are minor memories, but still part of the ancestor's life. Completing the required amount will ensure that the subject is acclimatised enough to relive the more traumatic moment of assassination.

Vidic - I never understood why we cannot just go directly to the memories we are interested in. I want a proposal from you by Monday on how we can decrease the number of minor memories needed for acclimatisation.

4.3.1 Pickpocket

To pick someone's pocket, lock onto a designated target and carefully follow him without being noticed. Pickpocketing can be accomplished by pressing the Hand button **B**, and can be performed while the target is moving. When the target stops, it's because he is suspicious. Stay away while he is looking around so that he does not become suspicious of you...

Vidic - And please, WATCH the target's head! If he's looking at the ancestor, DON'T pickpocket!

4.3.2 Eavesdropping

The objective is to spy on a secret conversation between two or more characters. To eavesdrop, the ancestor must sit on a bench, lock onto the characters, and press the Head button **Y** to listen. Looking at the targets is necessary to hear the information.

4.3.3 Interrogation

Some information is harder to get and needs to be extracted. After locking onto a despot, the ancestor needs to track him and choose the right moment to engage in a fistfight in order to get the information he needs.

4.3.4 Informers

Assassins that you encounter on city streets are Al Mualim's informers. They will provide you with information about your target in exchange for services. Pay close attention to the instructions that the informer gives you. He will only reward you with information if you follow his instructions to the letter.

12

(A)

Vidic - Lucy, add this to your document before you submit it:

- Eagle Vision can be used to spot people who have important investigation information.
 - Pickpocket victims always wear a bag on their left side.
 - Despoys pose as town criers and spread propaganda about their corrupt masters.
 - Investigations can only be performed while anonymous.
- Judging by Subject 17's traits in your notes, he'll need all the help he can get.

4.4 Save Citizens

There are two types of citizens to be saved: vigilantes and scholars. Citizens you save will help you in return. Lock on to an assaulting soldier to save the citizen who is being harassed. Once you have killed all aggressive soldiers, don't forget to talk to the citizen you have saved so that he or she tells his or her friends of your good deed.

Vigilante: If you save a vigilante's daughter or wife, the men of the family will help you in return. Escape down a street where your vigilante friends hang out and you will easily lose pursuing soldiers. Vigilantes will block your enemies' path, giving you time to escape and hide.

Scholar: Because of the nature of their work, scholars have access to all areas of the city. Befriend these men in order to gain access to restricted areas.

4.5 Templars

Templars are easily identified by their clothing (white uniform with a red cross). If discovered, they attack on sight. The ancestor is rumoured to have killed every Templar in the Holy Land.

4.6 Flags

Flags are located throughout the cities and kingdom. They were a popular way to lay claim to an area, but in the assassin's mind, these were false claims. They seemed to believe that the Holy Land belonged to no-one and everyone.

Vidic - Picking up flags and helping old ladies! I thought Desmond's ancestor was an assassin, not some flag-stealing Robin Hood. I suppose that performing these activities helps our subject synchronise with his ancestor and we will have to endure it, but really Miss Stillman! The coma is starting to look like an increasingly attractive option.

5. Game Structure

An assassin must always gather information about his target and scout the surrounding area in order to plan a successful attack.

Step 1: Viewpoints: The first thing that Altair did upon entering a new district was to climb to the top of the tallest buildings. This gave him a viewpoint from which to scan the surrounding area.

Step 2: Investigation: The second step in preparing for an assassination is gathering as much detailed information about the target as possible. Information can be obtained through interrogation, by eavesdropping, by pickpocketing, or with the help of assassin informers.

Step 3: The Bureau: Once an assassin thinks he is ready, he must go see the city's Assassin Bureau leader in order to obtain the feather. The feather must be dipped in the target's blood and then returned to the Bureau leader as proof that the deed is done.

Vidic - Lucy, didn't you say that the new animus update allows us to jump to the assassination mission without doing all of the investigation missions? We need the animus to fill in the blanks on some of these if we are going to make our deadline.

6. Menus

6.1 Main Menu

New: Start a new session within the animus.

Continue: Continue the existing session.

6.2 In the Animus

6.2.1 Main Menu

Start/Continue Session: Begins a new session to record, and initialises the first memory block. Continue Session resumes a session during a memory block.

Memory Log Timeline: Browse the memory block through a DNA timeline. By selecting one memory block, the subject can access his objectives.

Options: Adjust certain animus options such as blood content, sound, brightness, control and HUD display.

Exit Animus: End the session and exit the animus. This will give the subject a quick reprieve, allowing him to stretch his legs a bit.

6.2.2 Pause Menu

Resume Session: This will reactivate the session that the subject had paused.

Options: Access the Animus menu.

Map: Access the map of the region in which the subject's ancestor is located.

Quit Session: Ends the session and allows the subject to exit the animus.

Memory Log Timeline: Browse through the DNA memory block timeline. By selecting one memory block, the subject can access its objectives.

CC: Lucy Stillman
Subject: Animus Functionality & New Subject
Attachments:

Hello,

We've recently acquired a new subject for the animus - make sure to change all passwords on our computers. We can't have him exploring the net and reading his mail from our system, now can we?

Also, I've received news of a new security employee starting today. Make sure he doesn't forget to record our sessions and every move the subject makes. Unless, of course, pressing a button when indicated is simply too complex a task.

Lucy - with the new subject arriving, I'll need your latest document on the animus functionality.
